

SUTHERLAND MEDICAL SUPPORT AND IMMOBILISATION PRODUCTS

The **Sutherland Medical Support & Immobilisation** product range are quality Australian made products manufactured in a wide range of sizes.

Our **knee Immobilisers** allow full immobilisation of the knee in full extension, while providing mediolateral support.

Collar Care arm slings are designed to provide support to the clavicle area or to provide full immobilisation of the shoulder.

Sacro cinch back supports are designed to alleviate pain & discomfort in the sacral region. By transfer pressure to the abdomen and in some instances restricting mobility these supports are effective during rehabilitation or treatment.

Abdominal Binders are ideally designed to provide support and compression to the ribs, abdomen or lumbar area in post operative or post injury environment.

Wrist Splints are ideal for providing support tot the wrist and limiting movement. They are also suitable for use in treating joint pain, strains, RSI and post plaster cats removal.

Cervical Collars are ideally designed to limit cervical flexion
