Introducing **Height Measure**:
A simple solution to measure
height.

OTHER

Height Measure

Sutherland Medical Height Measures are specifically designed for quick, simple and accurate assessment of a patient's height.

The Height Measure is designed to be wall mounted at a height of two (2) metres (200cm) from the floor. The patient then stands under the measure and it is lowered to rest on the patient's head.

The display panel at the front of the Height Measure provides a clear, accurate and easy to read Height Measurement.

Height Measures also contain a chart for recording height measurements.
