Pearls® Gelling & odour control sachets

Advanced Silicone Technology

Trio Pearls® is a super absorbent gelling sachet that actively absorbs odour. Designed for ostomates with liquid stool, it can allow you to gain more control over the management of your ostomy and your life. Liquid stool can cause embarrassment or discomfort by leaking, smelling, or feeling like it is 'sloshing' about. You may sometimes feel anxious or apprehensive to take part in social activities or anything where you feel you may not have access to a toilet for a long period of time. Regular gelling agents can absorb the liquid in stool, but do not address the odour issue associated with it. **Trio Pearls®** has NanoActive Technology, a nano-engineered ingredient that absorbs odorous molecules rather than just trapping them in a gel. **Trio Pearls®** can also provide control by absorbing the fluid in liquid stool, and gelling inside the pouch. The formed gel is thicker in consistency which helps to prevent leaks normally associated with liquid output; prevents the filter from clogging prolonging its efficiency; and avoids bulking by allowing the content to be flattened.

Features:

- Actively absorbs odour during wear
- Preserves filter
- Prevents leakage
- Makes the pouch more discreet
- Easier drainage/less messy
- Gel does not stain clothes or toilet
- Security over longer periods
- Noticeable reduction in odour when draining
- Eliminates 'sloshing'
