Silex[®] silicone flange extender

Advanced Silicone Technology

When extra adhesion and enhanced protection against leakage is required, **Trio Silex[®]** soft silicone flange extender is your product of choice. Designed to ensure the edges of your base plate do not lift, but instead are kept securely in place. **Trio Silex[®]** is probably the most flexible and secure ostomy fixation device available.

With its instant, high-tack, soft silicone gel adhesive, **Trio Silex[®]** will allow for significantly more freedom of body movement than hydrocolloid products. This is due to its very thin profile and flexible construction. For use on either one or two-piece ostomy appliances, keeping your base plate secure can mean longer wear times, greater comfort and peace of mind.

Removal of **Trio Silex[®]** is easy - high-tack adhesion but removes in one piece leaving no residue, **Trio Silex[®]** allows your skin to breathe, resulting in reduced risk of maceration and healthier skin.

- Improved Instant, high tack, soft silicone gel adhesive
- Instant, high tack. Soft silicone gel adhesive
- Designed for optimal fit for all ostomy appliances
- Highly flexible – allows for more freedom of body movement
- Thin profile – for greater comfort and flexibility
